PROJECT DOCUMENTATION

Student Innovation in Tourism

Prepared by: Merlin M
Team Name: Inovix
Team ID: SIHSW02
Hackathon: Smart India Hackathon 2026
Problem Statement ID: 26202
Theme: Tourism

1. Introduction

Tourism helps people explore new places. Planning a trip can take time because people need to find tourist places, hotels, restaurants, and travel costs.

Our project aims to make trip planning easy by providing all these features on one platform.

2. Proposed Solution

We propose a tourism platform that helps users plan trips based on their destination, budget, interests, and available time.

It includes an AI chatbot, an interactive world map, a budget planner, and an itinerary generator.

3. Objectives

- To make trip planning easy.
- To help users find tourist attractions.
- To plan trips according to budget and interests.
- To estimate travel expenses.
- To discover nearby hotels and restaurants.
- To provide travel assistance in multiple languages.

4. Main Features

AI Chatbot: Provides travel information in multiple languages.

World Map: Helps users explore countries and tourist places.

Budget Planner: Helps users estimate travel expenses.

Itinerary Generator: Suggests a travel plan based on user preferences.

Nearby Places: Helps users discover hotels, restaurants, parks, museums, and viewpoints.

Hidden Destinations: Helps users explore lesser-known tourist places.

5. Technologies Used

- Frontend: HTML, CSS, JavaScript
- Backend: Java, Spring Boot
- Database: PostgreSQL
- Other Components: AI chatbot and interactive world map

6. Working Process

1. The user enters the destination, budget, interests, and available time.
2. The AI chatbot provides travel assistance.
3. The system suggests a travel itinerary.
4. The user explores places using the world map.
5. The budget planner helps estimate expenses.
6. The user uses the information to organize the trip.

7. Feasibility

The project can be developed using existing web and mapping technologies. A database-based system can help store and update tourism information.

8. Challenges

- Keeping tourism information accurate.
- Managing API costs and limitations.
- Updating changing travel information.
- Handling poor internet connectivity in some locations.

9. Benefits

- Saves time in trip planning.
- Helps users manage travel expenses.
- Makes tourist places easier to discover.
- Helps users find hidden destinations.
- Provides personalized travel suggestions.
- Brings several travel-planning features into one platform.

10. Conclusion

Student Innovation in Tourism aims to make travel planning easier and more convenient. By combining an AI chatbot, world map, budget planner, and itinerary generator, the proposed platform helps users discover destinations and organize their trips.
